#### 1. Select a "Role"

# Instructions

| Position                           | Commodition (Deleted Chille  |
|------------------------------------|--|
| Title                              | Commodities/Related Skills   |
| Quality<br>Engineering             | Utilize quality science techniques to effect continuous performance improvement at assigned suppliers; Reviews, analyzes, and reports on quality discrepancies related to process, assembly, manufacturing, mechanical, electrical, hydraulic, or electro-mechanical systems; Ensure that performance and quality of products conform to established company and regulatory standards; Use surveillance and auditing techniques to identify opportunities for process and product improvement; Interfaces with manufacturing, engineering, customer, supplier, and procurement (as appropriate) to ensure requirements / expectations are satisfied; Facilitate development of supplier recovery plans; Monitor and evaluate supplier process for compliance to purchase order and engineering requirements; Collaborate with supplier to investigate root cause and corrective actions when process or product deficiencies are detected; Identify, plan, and facilitate cross-functional improvement activities; Deploy variation management tools and techniques at select suppliers to mitigate risk; Have performed Quality System Audits, AS9102 First Article Reviews; computer proficiency and proficiency with MS Office products.  |
|                                    | Additional Comments  Travel is required and may extend beyond the local area. Initial supplier assignments may change to meet customer requirements. Work hours are not fixed or guaranteed and may extend beyond 40 hours per week to meet customer requirements. Aerospace supplier experience is preferred and may be used as the primary selection criteria among equally qualified candidates.  |
| Quality<br>Engineering<br>Lead     | Provides technical guidance and mentoring to an assigned team of contracted quality engineers to facilitate the success of their team and assigned suppliers. Works closely with Aeronautics management and peers to develop and disseminate strategic initiatives. Assists in communicating and maintaining command media developed for contractor use. Maintains metrics on team performance.  |
| Source /<br>Receiving<br>Inspector | Verifies completed product to purchase order, drawing and associated specifications. Ability to adequately inspect Aerospace level electronic components and assemblies. Includes CCA or PWB for industry specifications such as J-STD-001 and IPC 610. Previous  Mechanical / Other  Verifies completed product to purchase order, drawing and associated specifications. Ability to adequately inspect Aerospace level mechanical components and assemblies including welded and machined parts for compliance with industry and LM specifications. Knowledge of standard inspection tools to include CMMs is required. Previous machine shop experience, final inspections and Aerospace products.  NDT and Special Process  Verifies completed product to purchase order, drawing and associated specifications with respect to Non-Destructive Testing and Special Processes (e.g. Heat Treat, Aluminum Aging, Shot Peen, Anodizer/Alodine, Prime/Paint, Cleaning Methods, etc.) application/conformance. Ability to review overall inspection process for compliance to NAS410 and other applicable specifications and standards. May require prior level II or level III NDT Inspection Certification. Must have demonstrable understanding of non-destruction inspection and special process applications for Aerospace manufacture.  Related Skills  Include but not limited to Complex Electrical, Power Supply, Printed Circuit Board (PWB), Printed Wiring Assemblies (PWA) Radio Frequency, Soldering, Geometric Dimensioning and Tolerancing, Weld/Braze, Heat treat, Composites, Optics, Manufacturing, Liquid Penetrant, Radiography, Ultrasonic, Mag Particle, Visual, Eddy Current, Surface Mount Technology, Polymerics |
| Surveyor                           | Non-Destructive Testing (NDT) and Special Process Application  Assesses compliance to technical specifications. Has held a Level II or Level III NDT Inspection certification. Intimately familiar with Special Process (e.g. Heat Treat, Aluminum Aging, Shot Peen, Anodizer/Alodine, Prime/Paint, Clean Methods, etc.) application/conformance/compliance. Has completed LMC testing and surveyor training. Has a background and knowledge in quality management and prevailing quality management systems. Must have demonstrable understanding of special process applications for Aerospace manufacture.  Related Skills  Solder, Printed Wiring Board (PWB), Printed Wiring Assemble (PWA), Cable, Harness, Harness assembly, Components, Units, Chemical Processing, Heat Treating, Weld/Braze, Castings, Forgings, Stampings, Sheet Metal, Additive Manufacturing, Liquid Penetrant, X-Ray, Ultrasonic, Mag Particle, Hybrids, Surface Mount Technology, Polymerics, Digital Detector Array/Computed Radiography   |
